Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	- Collects applicant profile details (income, background, assets). - Cleans and verifies missing fields manually from documents. - Registers basic applicant profiles into the intake system.	- Enters applicant parameters into the 3-step wizard form. - Submits input data to run the XGBoost prediction model. - Observes the calculated prediction status and confidence score.	- Confirms the final loan approval or rejection decision. - Saves the processed transaction details to the local database. - Reviews historical data logs and performance metrics.
Touchpoint <i>What part of the service do they interact with?</i>	- Raw client documents and CSV files. - Initial customer profiling layout page. - Local database User directory interface.	- Interactive 3-Step Predictor form wizard page. - ML feature mapping and MinMaxScaler processor. - Deployed XGBoost predictor backend.	- Visual submit dashboard showing approval result status. - History log list layout table. - SQL database backend tables (PredictionResult).

Customer Thought <i>What is the customer thinking?</i>	• "I hope the applicant provided correct details on credit history." • "Checking all these numbers manually is slow and exhausting." • "How do I handle applications with missing fields?"	• "This step-by-step form makes data entry simple." • "Will the machine learning model yield an accurate decision?" • "How does the model compare this user against past data?"	• "It is helpful to keep track of these decisions in the history." • "I can delete sample runs directly from the log database." • "The confidence score helps justify my final decisions."
Customer Feeling <i>What is the customer feeling?</i>	• Stressed by the volume of manual paperwork. • Anxious about making mistakes during data entry. • Eager for a faster, structured intake system.	• Relieved by the quick form validation warnings. • Confident in the automated machine learning analysis. • Excited by the fast response times.	• Satisfied with the quick approval decision. • In control of database logs with the deletion features. • Reassured by the database history backup.

Process Ownership <i>Who is in the lead on this?</i>	Credit Analyst / Intake Clerk	Automated SMART Lender Predictor Engine	Systems Administrator / Risk Manager
Opportunities <i>How can we improve this stage?</i>	• Integrate document scanning to extract text automatically. • Allow direct data imports from external CSV files. • Implement automated validation alerts on empty fields.	• Allow batch scoring of multiple files simultaneously. • Show comparisons of different ML algorithms side-by-side. • Include custom field weights options for custom adjustments.	• Add automated notification updates for applicants. • Enable PDF reports generation of the decision sheets. • Integrate history logs with bank management platforms.
